

From Idea to Business

Six-week course outline

A practical entrepreneurship course. Students take an untested idea to a real customer, a real offer, a real buying signal, and a first delivery, and they make money from it.

Agriculture is a valid market when that is the student's territory. The outcomes stay the same in every market.

Course promise

By the end of six weeks, the student can say: I picked a problem, I built an offer, I asked the market, I delivered, and I made money.

The workbook is the record. If it is not in the workbook, it did not happen.

What the student can do by the end

1. Name a reachable customer and explain why those people can be reached this week.
 2. State a problem in the customer's language, with evidence from real conversation: what they already do, what it costs them, what is still a guess.
 3. Write the before-and-after: where the customer is now, where they are after the offer works.
 4. Write an offer: who it is for, what they get, what is included, how it is delivered, what they pay.
 5. Run a demand test and read the result: paid, deposit, written commit, or a clear no.
 6. Deliver the smallest useful version once and record what it took.
 7. Keep an evidence file: decisions, conversations, numbers, and what changed. That file is the business plan.
-

How each week works

Open. Text answers "What am I learning today?" and states the week's outcome. Video appears only when a move is easier to see than to read.

Do. Fieldwork plus a GPT. The student pastes a prompt, puts in real notes, and answers questions. The GPT runs the drill. The market does the teaching.

Capture. Everything lands in the week's workbook pages.

Live session. Students submit questions from the work. The session opens with a short webinar that answers those questions, then remaining live questions. Examples come from that week's workbooks.

Optional reading for mindset sits in a bonus shelf. It is never required to pass the week.

Concepts in use:

- *The Mom Test* for conversations (their life and past behaviour, not “do you like this?”).
 - *\$100M Offers* for building the offer.
 - *\$100M Leads* for putting the offer in front of people and asking.
 - *The Millionaire Fastlane* and *Unscripted* as optional mindset reading.
-

What an offer is

Five lines, all filled:

1. Who it is for
2. What they get (the transformation)
3. What is included
4. How it is delivered
5. What they pay

If a line is blank, there is no offer yet.

Offer economics: if five people say yes, the student can still deliver lines 3 and 4 at line 5 without going broke.

The six weeks

Each week has one transformation and one proof. Talking to people happens in more than one week. The job of the conversation changes.

| Week | Student starts here | Student ends here | Proof in the workbook |

|---|---|---|---|

| 1 | I have an idea, or I care about a space | This is the problem, this is who has it, this is the before and after |

One page: who, problem in their words, A-to-B, a hypothesis that can fail |

| 2 | I have a problem | I have an offer, and I have started talking to the people it is for | Five-line offer, list of real people, notes from first conversations (understand, do not sell) |

| 3 | I think they want this | I asked. Here is what they did | Ask log: who, what was offered, ignore / no / maybe / yes / paid |

| 4 | The test is messy | This is the offer we are keeping, this is how much we can make, this is the smallest way to deliver | Recertified offer, reachable-money math, MVP steps |

| 5 | We have a plan | We are selling and filling the first jobs | Pipeline: contacts, live deals, money in or a dated commit; delivery started if someone paid |

| 6 | Something happened | I can show what happened, and it helps the next sale | Case study: customer, problem, what we did, result, money; complete evidence file |

Week 1 — Problem and transformation

Outcome. A decided problem and a clear A-to-B.

Proof. One page. Named, reachable people. Problem in their words. Current workaround and cost where it showed up. Before and after in one sentence. One hypothesis that can be wrong.

Conversations this week. Understand. Last time this broke, what they did, what it cost. No pitch.

Week 2 — Offer and first outreach

Outcome. A written offer and first conversations with the people it is for.

Proof. The five lines, complete. A short list of real people. Notes from those talks.

Conversations this week. Still understand. Map the customer. Do not ask for the sale yet.

Week 3 — Demand test

Outcome. The offer left the building. The student asked. The market answered.

Proof. A log of every ask: who, where, what was offered, what they did.

Conversations this week. Demand. Same kind of people as week 1–2. The offer is on the table.

Week 4 — Locked offer, money math, MVP plan

Outcome. The offer is recertified from the test. The student knows how much money this can make in a market they can actually reach. The smallest delivery is planned.

Proof.

- The five lines, updated from week 3.
- Opportunity in numbers: how many reachable people like the ones already spoken to, times price, minus cost to deliver. Count only people this student can reach.
- MVP plan: what the first paying person gets, the steps, the time, the cost.

Week 5 — Sales and marketing

Outcome. Selling with the locked offer. First jobs filled.

Proof. Pipeline. Who was contacted. Who is in. Money received or a dated written commit. Delivery underway where someone paid.

This week is the demand test, run again, cleaner.

Week 6 — Case studies and evidence

Outcome. A case study the next buyer, partner, or reviewer can read.

Proof. Customer, problem, what was done, result, money. Full evidence file. The file is the plan. A pitch deck is optional when someone needs to present.

Passing a week

A week is complete when a third party can open the workbook and see the “ends here” column. Effort without that artifact is incomplete.

Week 6 aims at money and a case study of a real customer event. A documented refusal with a loaded next test is recorded as what happened. The target stays a paid result.

What the course produces

A problem, an offer, a demand test, a first delivery, money, and a case study. The evidence file is the business plan. Agriculture is available as a market, not as a required identity. A certificate, if issued, sits on top of these artifacts.
