

FROM IDEA TO BUSINESS

A practical entrepreneurship course for Udyaan students

Ash enters the business world with an exciting idea - and discovers that a business is not built by guessing. It is built by mapping a market, finding a valuable problem, making an offer, earning payment, and learning from what happens next.

THE COURSE PROMISE

Every student leaves with real-world business experience: a specific opportunity, a tested offer, customer evidence, and a next build decision. The goal is not to protect students from uncertainty. It is to teach them how to navigate it.

A visual course proposal | Story structure + business outputs + experiential assessment

The transformation

Students arrive excited about entrepreneurship, but many have incomplete mental models of what a business is. The course turns that uncertainty into a sequence of real decisions.

BEFORE

"I have an idea, but I do not know how to turn it into a business." I want to build something cool, but I do not know who needs it, what they would pay, or what to do first.

AFTER

"I can identify a customer problem, create an offer, test demand, sell it, build a first version, and adapt based on evidence."

THE CENTRAL LESSON

A product idea is only a starting point. A business emerges when a person understands a valuable problem, creates a credible offer, earns a buying signal, and improves through real-world feedback.

WHAT STUDENTS PRACTISE

Choosing a market segment, finding a problem, estimating its value, shaping an offer, writing outreach, speaking with customers, asking for payment, delivering a first version, and deciding what to change.

The journey

The course is presented as a story. Ash is the student avatar: motivated, intelligent, and initially eager to build too soon. Each story beat corresponds to a real business capability and a visible artifact.

ASH'S BUSINESS MAP

THIS IS ASH

Ash is the student avatar: curious, under-equipped, and willing to learn by acting. Ash uses a compass, a notebook, and real evidence to move through the business world.

The story is not a straight line. Ash returns to the map after every test, carrying better evidence and a sharper next move.

THREE PHASES. ONE REPEATABLE CAPABILITY.

PHASE 1 MAP THE TERRITORY

Ash begins with a product idea. The market is covered in fog. Before building, Ash must discover who is in the territory and which problem is worth solving.

PROBLEM BEING SOLVED

"I have an idea, but I do not know who it is for, whether the problem is real, or whether it is valuable enough to build around."

SUBPHASE	WHAT ASH DOES	CHECKPOINT
Understand business	Separate an idea, product, offer, and business. Learn how value is created and how money enters the system.	Business direction + revenue logic.
Choose a territory	Move from broad interest to a specific market segment with reachable customers.	Defined segment + customer profile.
Find the dragon	Conduct customer conversations and distinguish recurring pain from opinions.	Evidence-backed problem statement.
Measure the dragon	Estimate frequency, urgency, alternatives, and financial cost.	Quantified problem worth investigating.

STORY TO BUSINESS

Ash maps a continent. The student narrows a broad interest into a market segment. Ash follows clues through the fog. The student conducts customer conversations. The dragon becomes visible. The student states a costly, recurring problem with evidence.

PHASE 2 FORGE THE WEAPON

Ash has found a real problem. Now the weapon must be designed for this particular fight. The weapon is not merely a product - it is the complete offer.

PROBLEM BEING SOLVED

"I understand the problem, but I do not know exactly what to sell, what result to promise, how to deliver it, or how to price it."

SUBPHASE	WHAT ASH DOES	CHECKPOINT
Define the result	Translate the problem into a specific result the customer wants and can recognise.	Clear customer outcome.
Shape the value proposition	Explain who the offer is for, what it changes, and why it matters.	Concise value proposition.
Build the offer	Set the customer, result, scope, delivery method, and price logic.	Concrete offer someone could buy.
Prepare the sales kit	Create copy, outreach messages, proposals, and tools needed to approach customers.	Usable sales and marketing kit.

THE OFFER LOADOUT

Target = customer segment | Enemy = customer problem | Mission = promised result | Weapon = solution | Ammunition = deliverables | Deployment = delivery method | Cost = price

PHASE 3 ENTER THE BATTLE

The weapon has never been tested. Ash must approach real customers, ask for commitment, deliver a first version, and learn what needs to change.

PROBLEM BEING SOLVED

"I have an offer, but I do not know whether people will buy it, whether I can deliver it, or what needs to change."

SUBPHASE	WHAT ASH DOES	CHECKPOINT
Find the dragon	Build a target list and identify reachable prospects.	Prioritised outreach plan.
Approach the dragon	Send messages, start conversations, listen for signals, and handle rejection.	Completed outreach + conversations.
Test the weapon	Present the offer and ask for payment, pre-sale, deposit, or commitment.	Evidence of demand.
Fight the first battle	Deliver the smallest version that can produce the promised result.	First delivery or prototype.
Study the battle	Use feedback to change the customer, problem, offer, price, or solution.	Revised offer + next build plan.

THE FIRST BATTLE IS NOT THE FINAL VICTORY

The first version may misfire. Customers may ignore it, misunderstand it, or ask for something different. That is not a course failure. The student is assessed on whether they learn, adapt, and make the next decision from evidence.

How the course is taught

The course is hybrid: written lessons establish concepts, short Loom videos make the thinking visible, and attached GPTs help students practise and improve real work.

STEP	WHAT HAPPENS
Written lesson	A focused idea, misconception, or framework.
Ash's story beat	The concept appears as a decision Ash must make.
GPT practice	Students draft, role-play, critique, or test the idea with AI.
Real-world task	Students speak to customers, write outreach, or test an offer.
Artifact submission	The work becomes evidence of business capability.
Feedback and iteration	AI and human feedback improve the next version.

THE TEACHING PRINCIPLE

Every story beat should lead to a business decision. Every decision produces an artifact. Every artifact improves through evidence.

Written lesson -> Loom -> GPT practice -> Real-world task -> Artifact -> Feedback -> Iteration

What every student must leave with

The course does not promise that every idea will succeed. It promises that every student will experience the business cycle and leave with stronger evidence about what to do next.

ARTIFACT	WHAT IT PROVES
Market territory	A specific segment and customer group.
Problem evidence	Customer conversations and a meaningful problem statement.
Problem value	A view of urgency, cost, and existing alternatives.
Offer	Customer, result, scope, delivery method, and price logic.
Sales kit	Copy, outreach messages, and a simple way to present the offer.
Demand test	A real buying signal, pre-sale attempt, or documented market response.
First build	The smallest useful version delivered or tested.
Iteration decision	A revised offer and evidence-based next build plan.

THE FINAL CAPABILITY

Students should be able to repeat the loop: enter an unfamiliar market, find a valuable problem, make an offer, ask for payment, deliver, learn, and adapt. That is the durable skill the course is designed to build.

THE COURSE IN ONE SENTENCE

Ash enters with an idea and leaves able to turn uncertainty into evidence, offers, and real customer value.

Timing and build estimate

A working estimate for planning the student journey and explaining the build effort. The first cohort will refine these numbers through real delivery.

STUDENT WORKLOAD

13 subphases x 3 hours each = approximately 39 active hours. This includes lesson work, GPT practice, and practical assignments.

AT 90 MINUTES / DAY

39 hours / 1.5 hours per day = 26 study days. At five study days per week, that is approximately 5.2 active weeks.

ACTIVE LEARNING PATH

PHASE 1 - 12 HRS

Map the territory

PHASE 2 - 12 HRS

Forge the offer

PHASE 3 - 15 HRS

Sell, build, learn

REAL-WORLD CALENDAR

Customer scheduling, waiting for replies, feedback, and iteration extend the calendar. Plan on approximately 6-7 weeks for the first cohort.

COURSE PRODUCTION ESTIMATE

Creating the lessons, Looms, GPT prompts, artifact templates, rubrics, and QA is provisionally 50-65 creator hours: 39 hours of core design plus 10-25 hours of integration and testing.
