

Learning finance through the decisions a business must make

A question-led curriculum for building scalable businesses enabled by technology.

START HERE

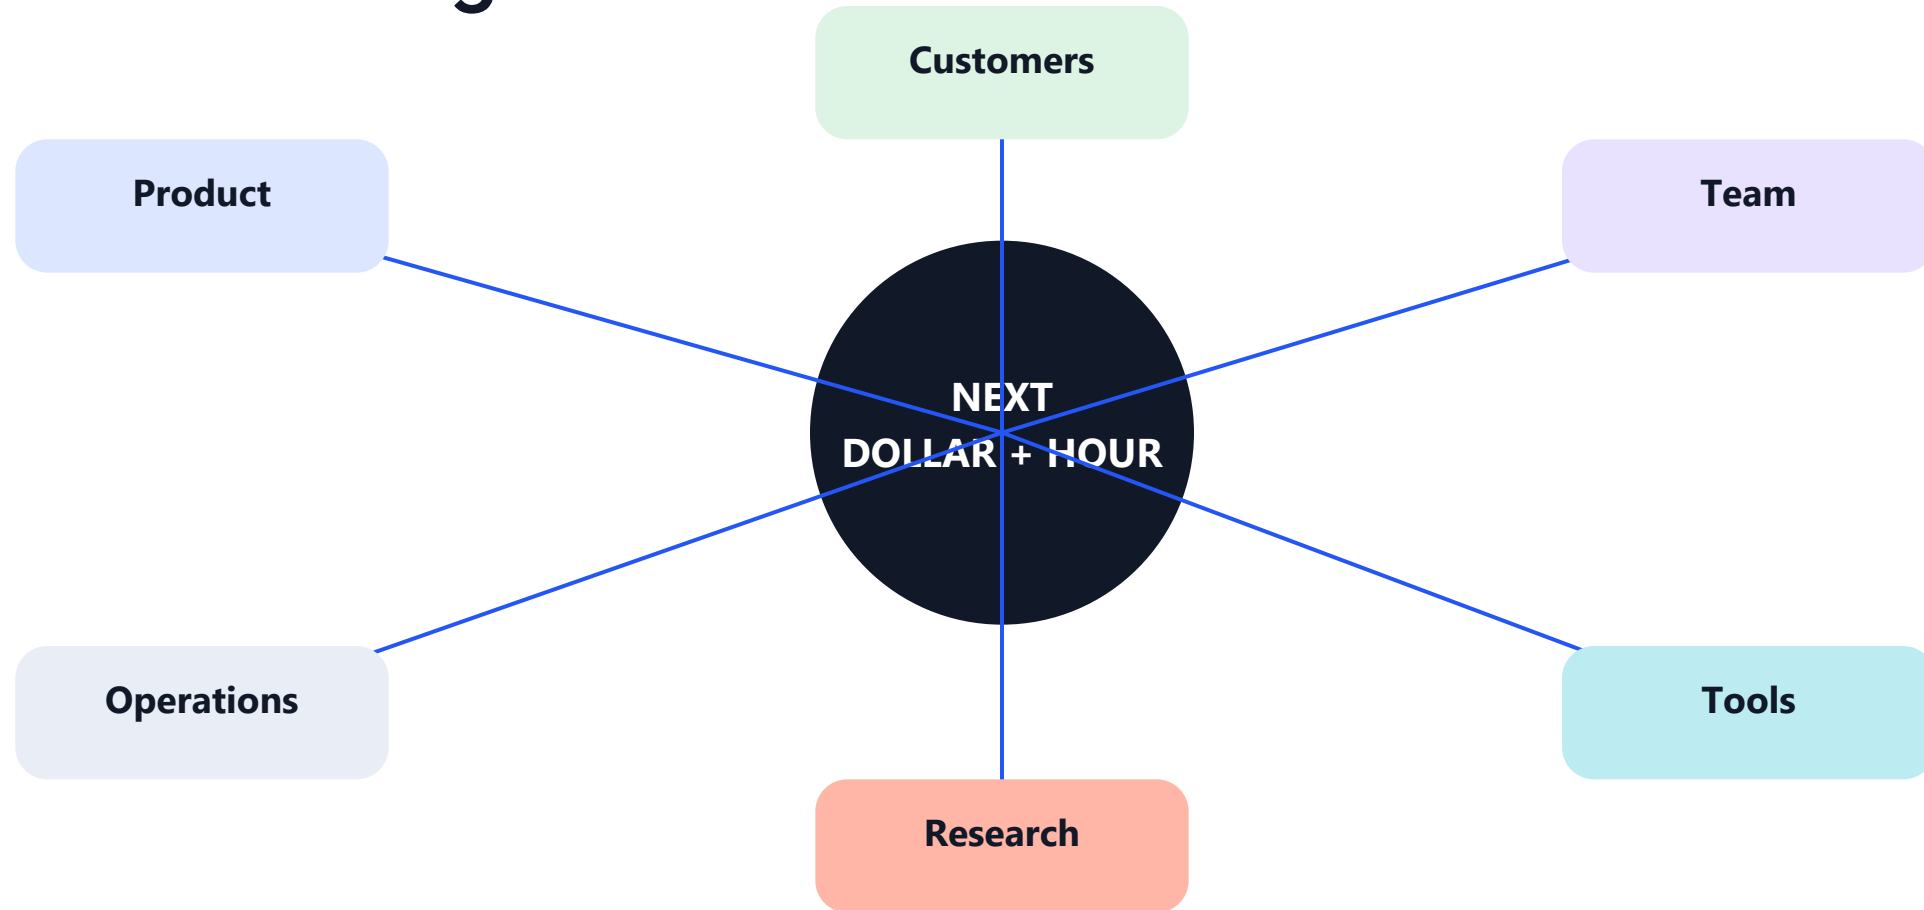

Use a real business question to find the knowledge needed next.

How do I decide what to charge for a solution, and whether it creates enough value?

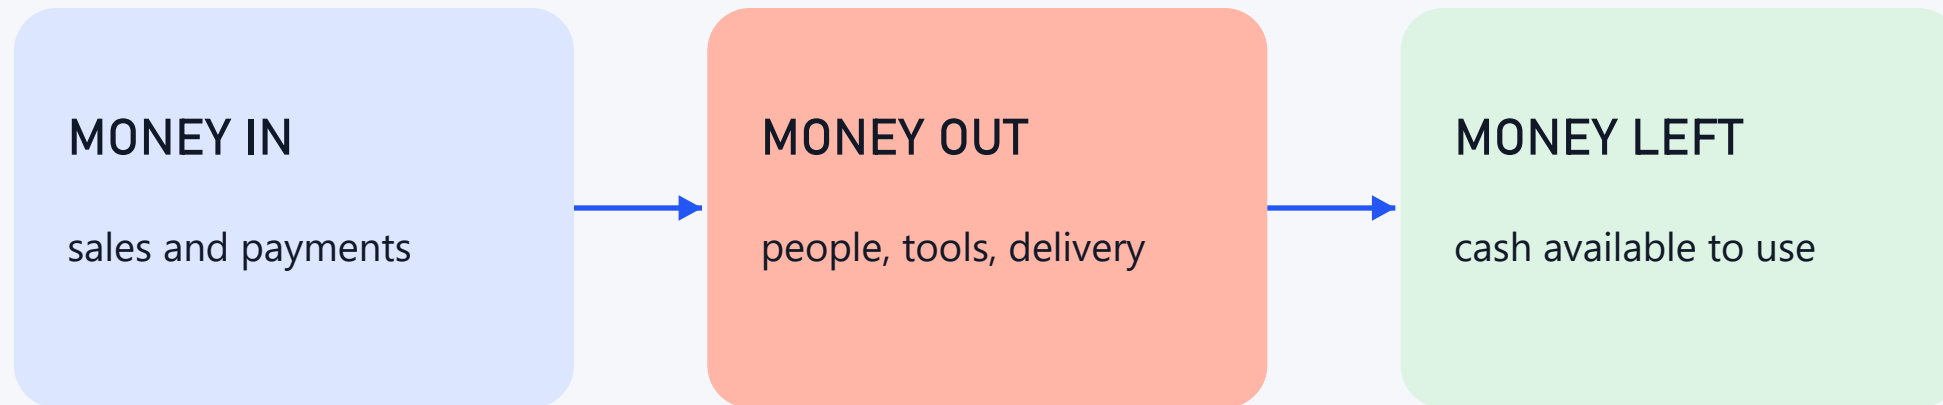

How do I decide where the next dollar and hour should go?

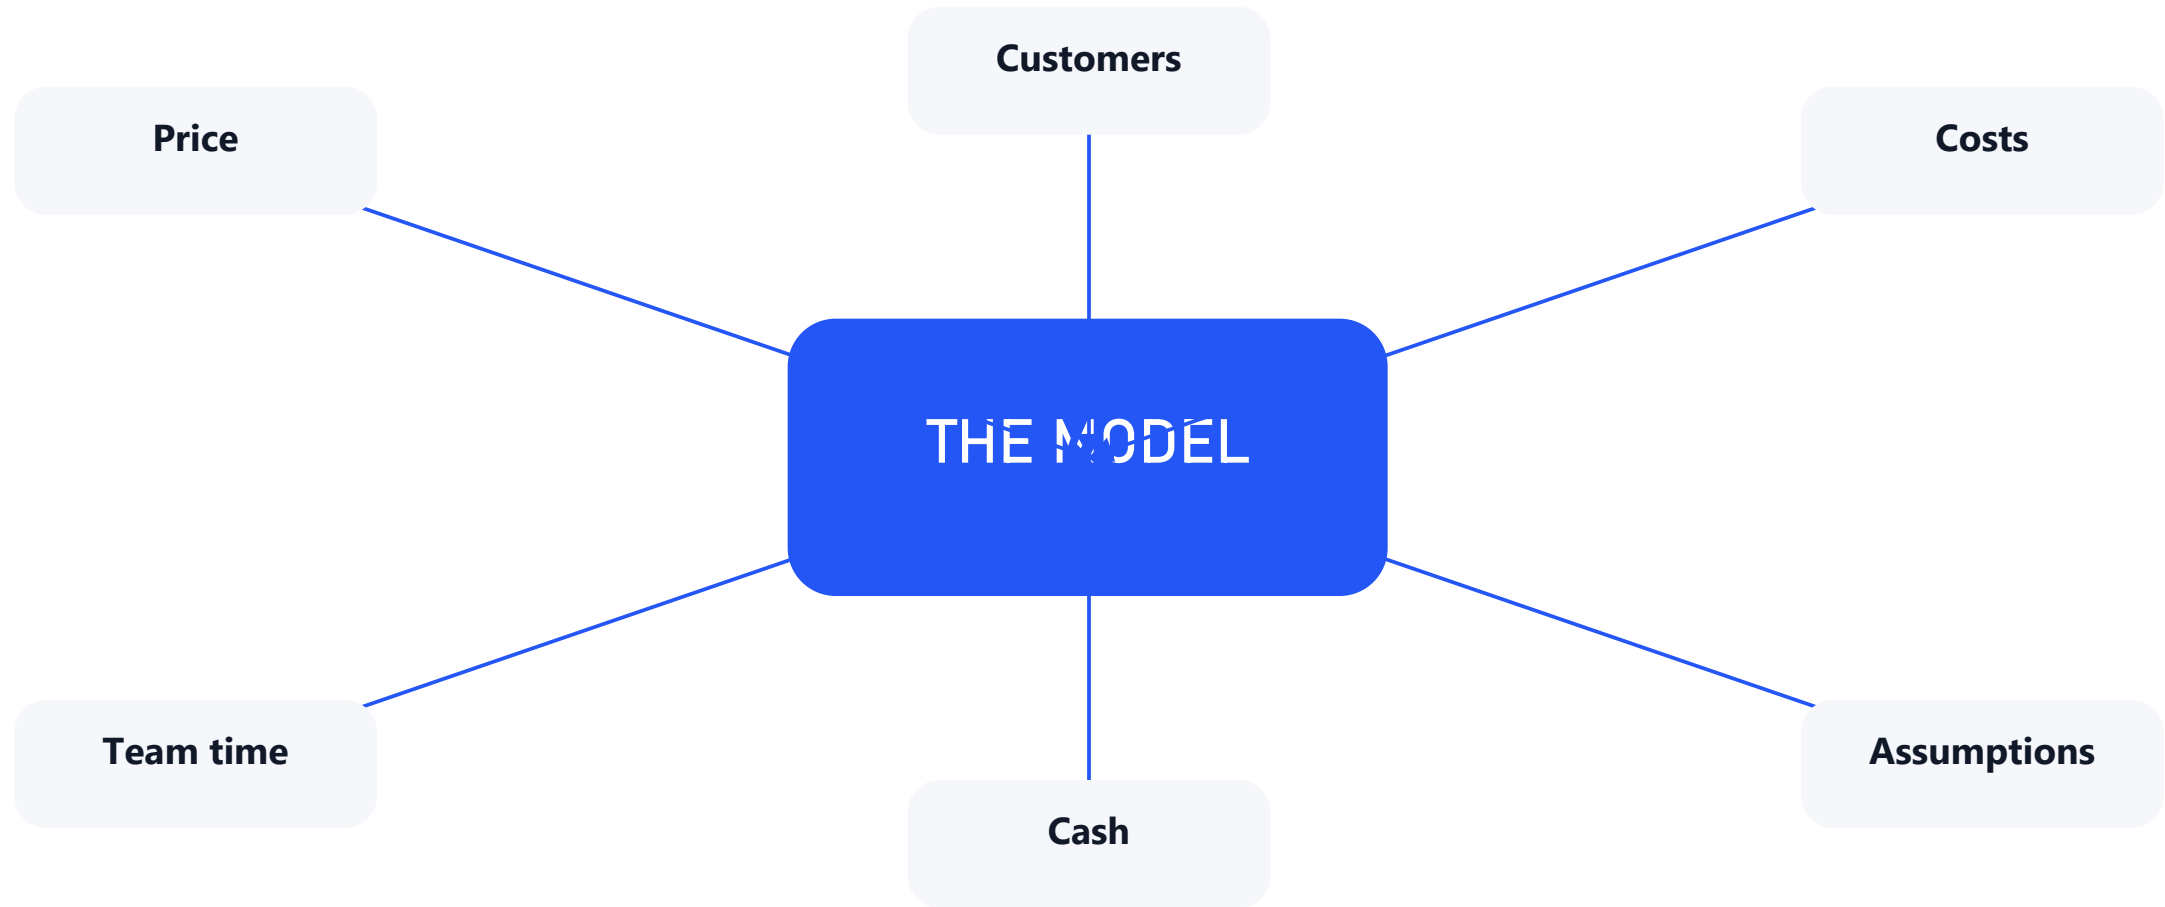

Every choice competes with another use of the same resource.

How do I know what is happening financially inside a business?

The numbers tell a different story when they are connected.

How do I build a financial model for a business?

A model turns choices into a view of what could happen.

How do I make a financial plan for the business?

EXPECTED

What is most likely?

STRONG

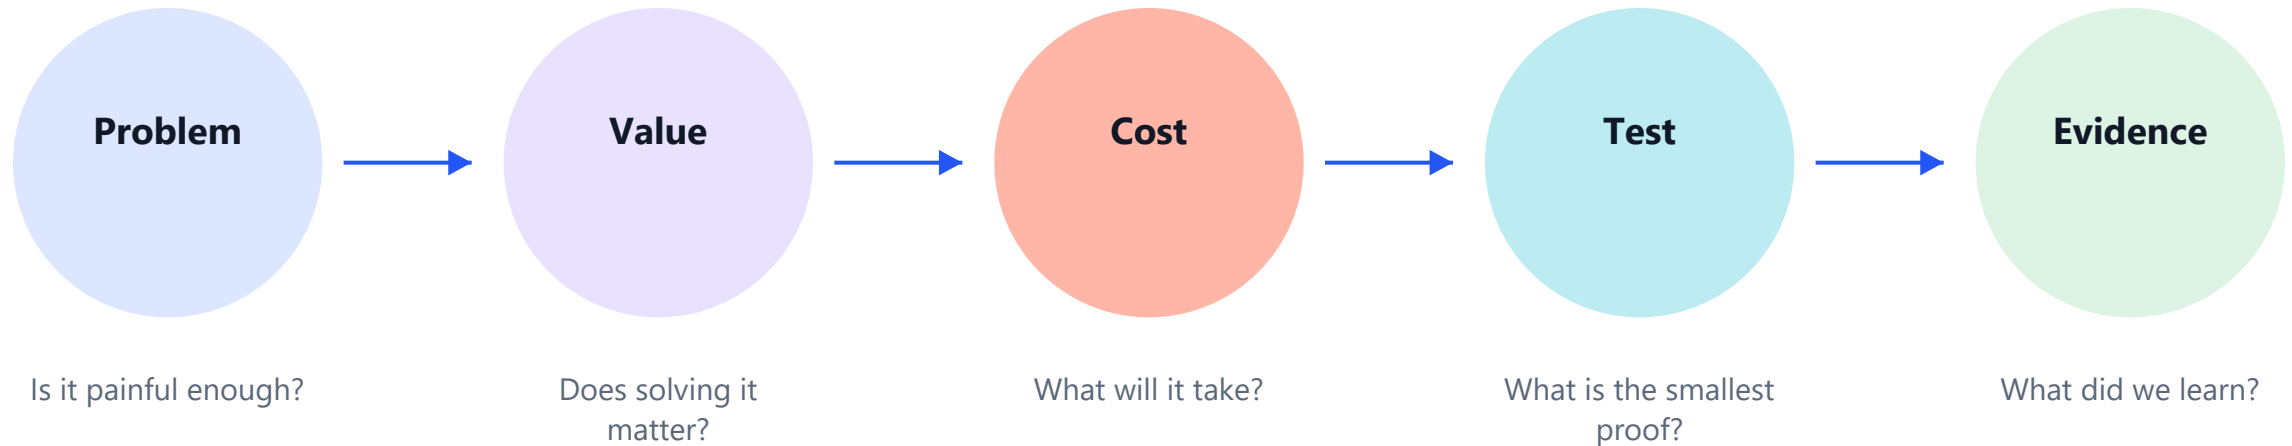

What changes if things go well?

DIFFICULT

What happens if money arrives late?

The plan is a way to prepare for different conditions before they arrive.

How do I know a problem is worth solving, what it will cost to solve, and whether it is likely to work?

How do I decide what a team member, tool, or research project is worth paying for?

PEOPLE

What contribution could this person make?

COST | EXPECTED RESULT | ALTERNATIVE

TOOLS

What work does this replace or improve?

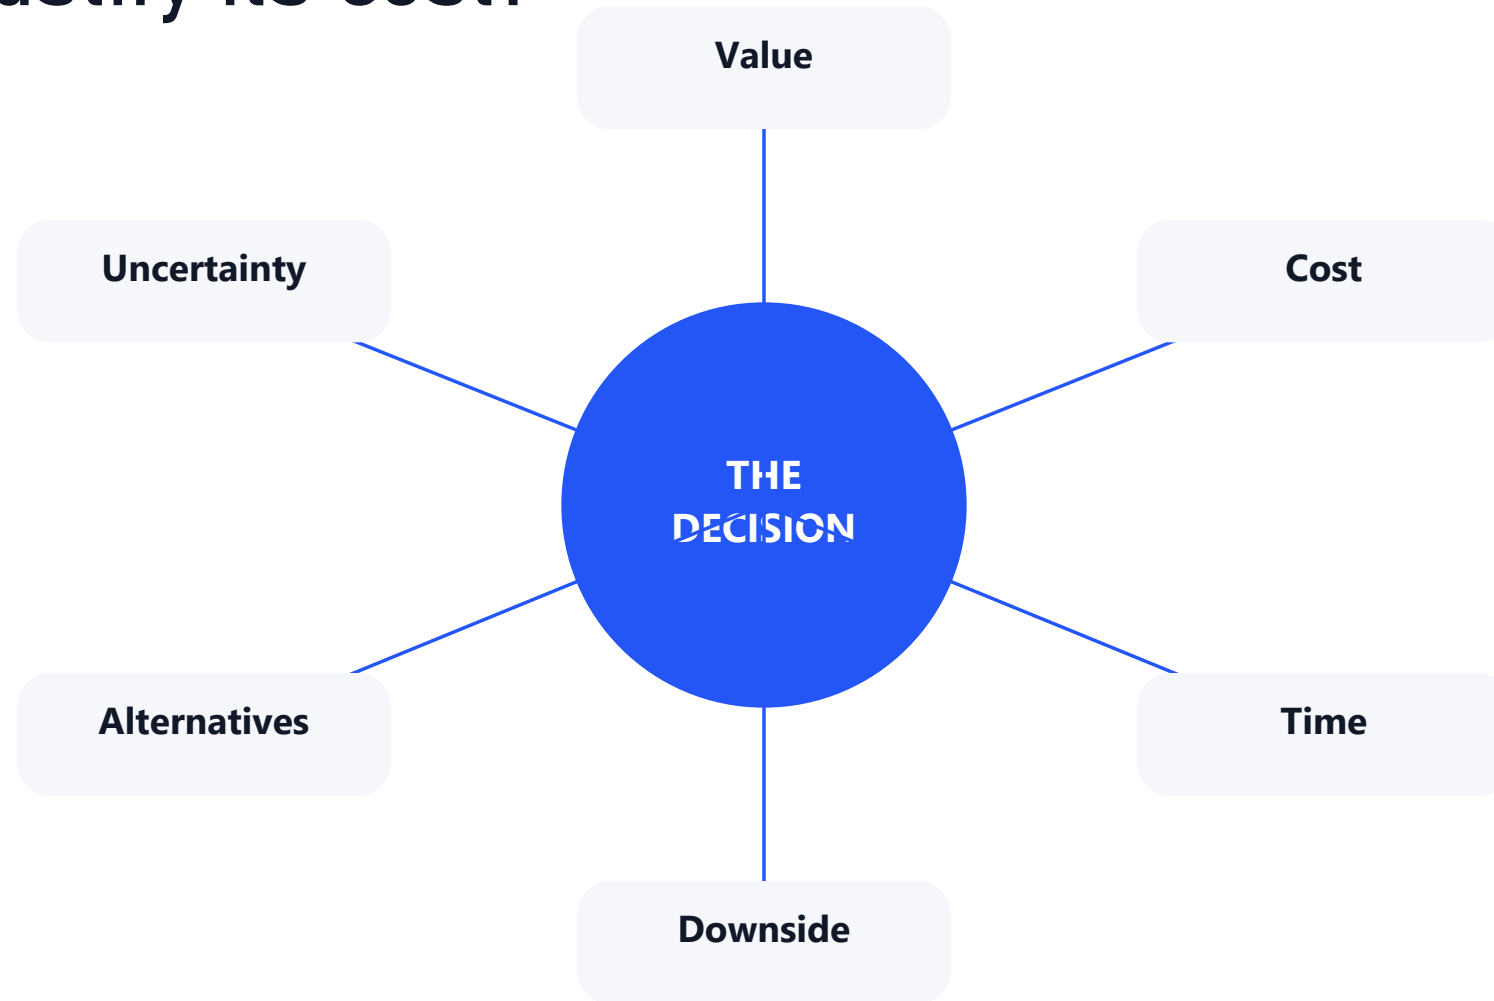

COST | EXPECTED RESULT | ALTERNATIVE

RESEARCH

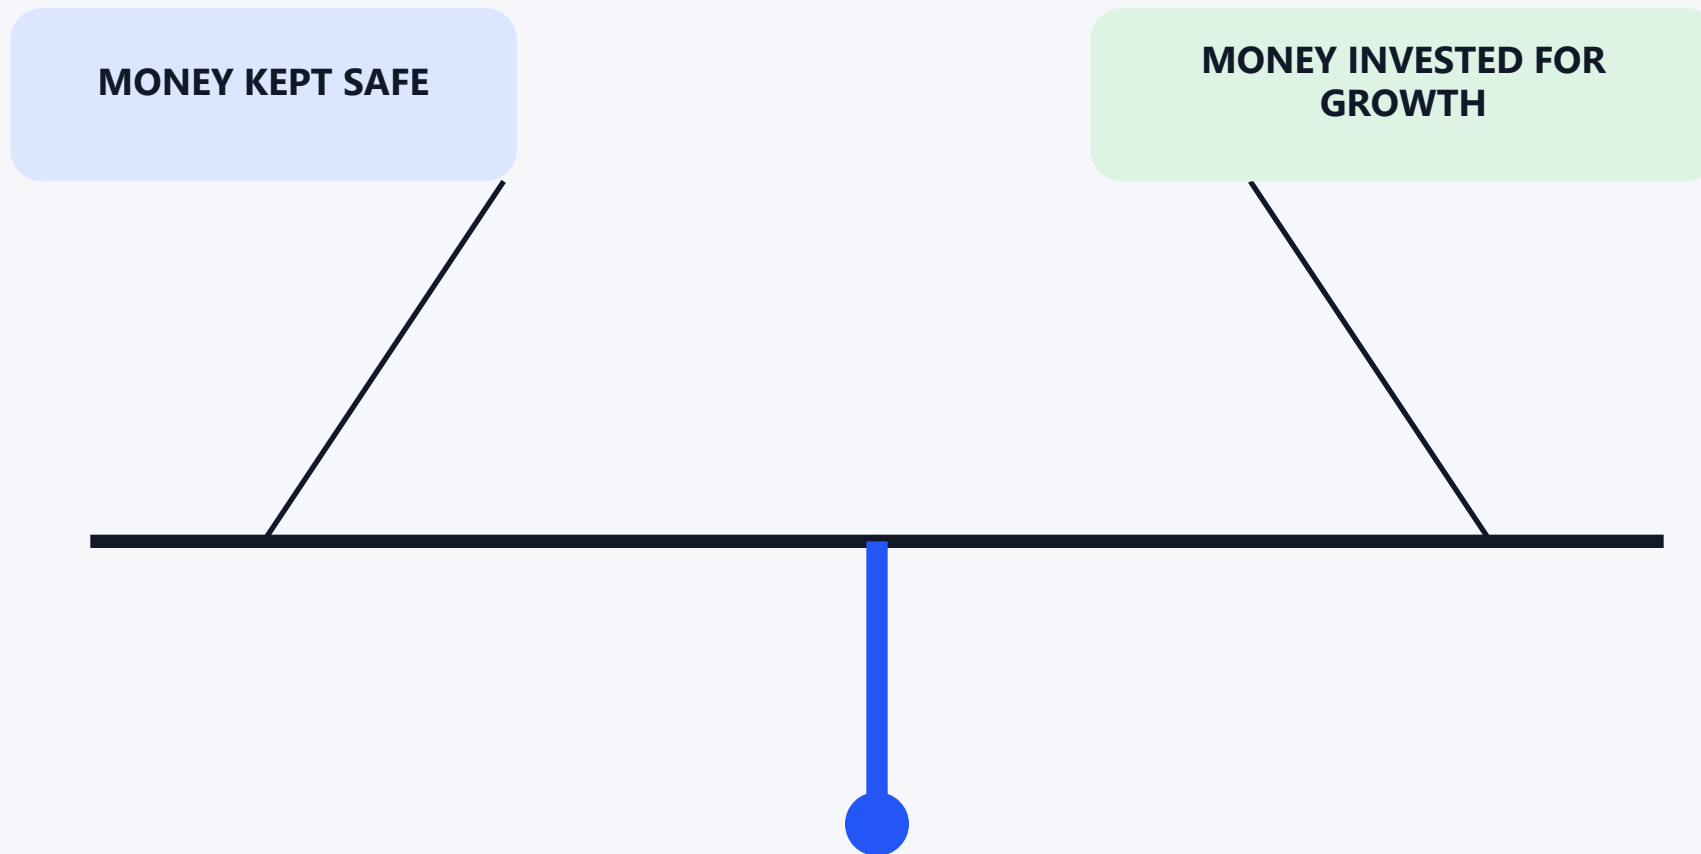

What evidence will this purchase?

COST | EXPECTED RESULT | ALTERNATIVE

How do I know whether a major spend will create enough value to justify its cost?

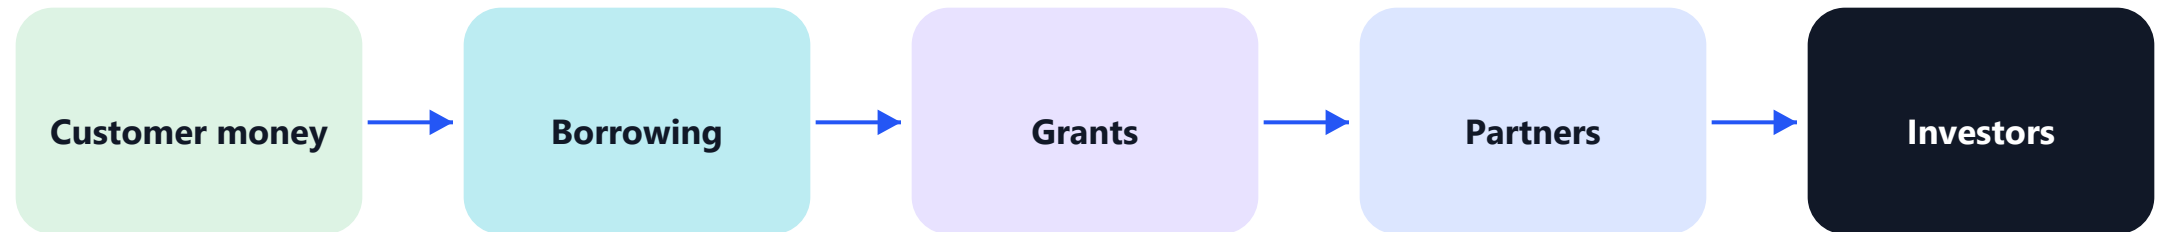

How do I keep enough money for both short-term survival and long-term growth?

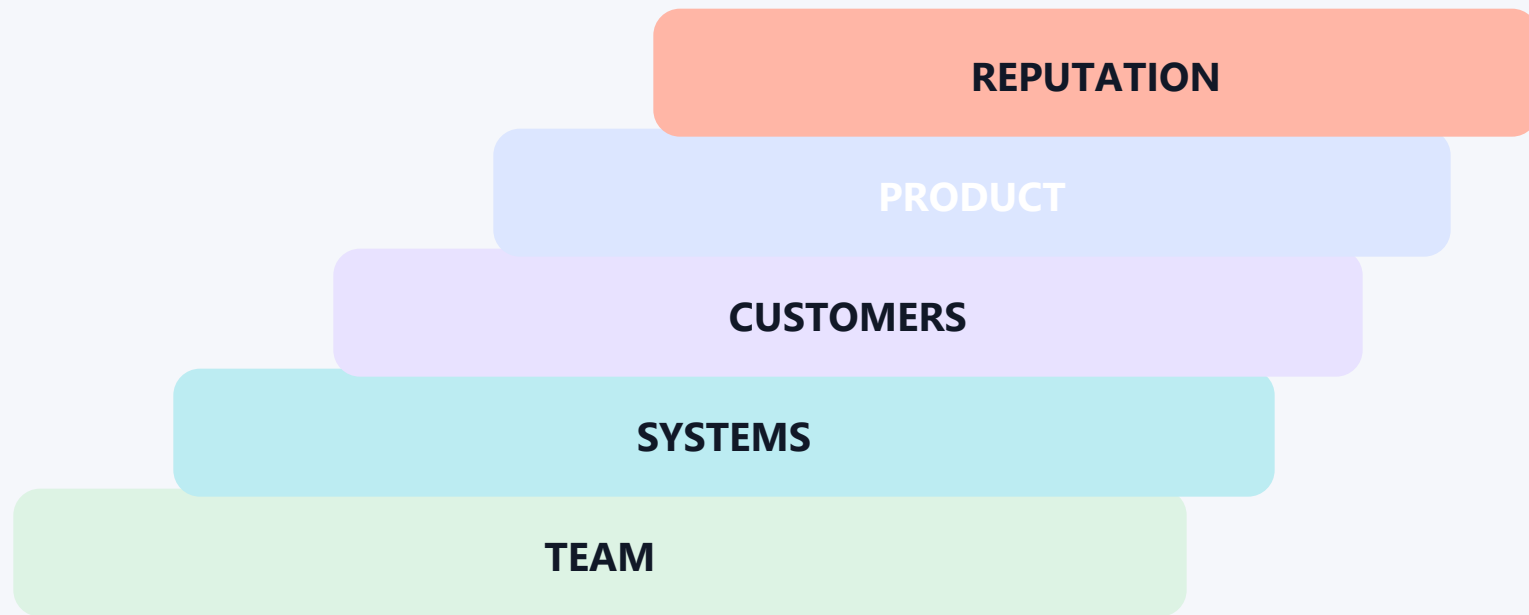

The business needs enough safety to keep making long-term choices.

When is outside money useful, and how do I raise it without making poor long-term decisions?

More money can create speed. It can also add repayment, expectations, and less control.

How do I build a business that becomes more valuable over time?

Long-term value grows from what keeps working, even when the founder is not in the room.

How will I know that I am learning this?
