

How Udyaan creates entrepreneurs and delivers industry results

Our objective

Enable **100 students across 12 disciplines** to solve real industry and agriculture problems through multidisciplinary project teams.

Student ventures Build enterprises from real problems	Industry-ready graduates Practical capability before graduation	Testable solutions For industry, government, and communities	Clear pathway Problem -> Project -> Pilot -> Enterprise
---	---	--	--

From isolated learning to industry-ready students

Udyaan connects real industry problems with students, faculty, and multidisciplinary teams. Students learn by contributing to real work: understanding a problem, defining a solution, building and testing it, and taking it toward a pilot.

Current model	Udyaan model	Student outcome
Industry problems remain outside the classroom	Real problems become applied projects	Learns to understand and solve a live problem
Business and technical learning happen in isolation	Students work across disciplines on one outcome	Learns to work in a multidisciplinary team
Students wait until after college to gain practical exposure	Projects create evidence of capability during college	Becomes job-ready with less employer training
Entrepreneurship is taught as an idea	Students build, test, and improve real solutions	Becomes capable of pursuing a venture

The same experience prepares a student to become an entrepreneur or enter a job with practical capability from day one.

Udyaan connects the full path from problem to enterprise

Project Management runs across the full path, ensuring each project has an owner, a defined output, and a next decision.

Udyaan's current team structure

Workstream	Current lead(s)	Responsibility
Project Management	Ayan, Manshi	Turn approved opportunities into managed projects with owners, milestones, documentation, and review.
Industry Integration	Ritheash	Bring in, validate, and define real industry, government, and community problems.
Academic Integration	Vishal	Connect projects to faculty guidance, student roles, learning outcomes, and research.
Production & Operations	Vishal	Develop, test, and deliver prototypes or operational pilots.
Digital Solutions	Ankit, Vishal	Build systems for applicants, projects, dashboards, tracking, and scale.
Creatives & Branding	Ritheash, Ankit	Make Udyaan clear and credible to students, partners, faculty, and external audiences.
Business Impact	Ankit, Ritheash	Take validated projects toward pilots, ventures, revenue, and measurable impact.

The team structure is being updated and may change as Udyaan expands.

Project Management is creating a common execution system

Responsible: Ayan, Manshi

Current work

- Project folder and documentation structure
- Project charter for G9 banana packaging
- Go-to-market launch plan
- Milestone and reporting template
- Shared document index

Project standard

Industry Integration is building the opportunity pipeline

Responsible: Ritheash

Industry Integration converts outside opportunities into defined projects that student teams can work on.

Potential opportunity currently being explored

- Microgreens
- Subsidy AI

Opportunities remain subject to validation, prioritisation, and collaborator confirmation.

Academic Integration is turning live projects into applied learning

Responsible: Vishal

Current foundation

- Faculty expression-of-interest base
- Student selection framework
- Interview rubric
- Multidisciplinary syllabus direction
- Student onboarding template
- Research and intellectual-property direction

Intended learning model

Every Udyaan project should give students a defined role, practical responsibility, faculty support, and evidence of what they can do.

Production & Operations is building solutions that can be tested

Responsible: Vishal

Once a problem is approved, Production & Operations turns it into a testable product, process, or pilot.

Current work areas

Microgreens	Bio-packaging	Bio-CNG
Precision agriculture	Apiculture	Turmeric

Digital Solutions is building the systems that help Udyaan scale

Responsible: Ankit, Vishal

Platform components

- Website and applicant journey
- Project dashboard
- Weekly pulse and team reporting
- Impact tracking
- AI-assisted screening and guidance
- Digital Maturity Index

Current priority

Improve the project dashboard through team feedback and strengthen website search visibility.

Go-to-market is one shared Udyaan programme. Digital supports it; it is not a separate parallel effort.

Creatives & Branding is building trust in the Udyaan story

Responsible: Ritheash, Ankit

Current work

- Brand positioning plan
- White paper
- Launch messaging
- Student and business collateral
- Pre-event creative material
- Social presence

A clear and consistent Udyaan story for students, faculty, industry, government, and investors.

Students	Faculty	Industry	Government	Investors
----------	---------	----------	------------	-----------

Business Impact: from a real problem to a viable venture

Responsible: Ankit, Ritheash

Business Impact starts by understanding the real problem deeply enough to identify a venture-worthy solution.

Current example: G9 banana packaging for Oye Desi

Symptom statement	“Bananas need better packaging”
V	
Structural problem statement	What is failing, for whom, at which point, and why?
V	
Research and validation	Understand users, constraints, existing alternatives, and feasibility
V	
Proof of concept	Develop and test a solution
V	
Pilot	Validate the solution in a real setting
V	
Venture pathway	Build a viable enterprise if the pilot proves demand and viability

Kanakpura Campus dry run

- Outline the big picture of how the event will work
- Get students excited about Udyaan
- Start student sign-ups
- Identify gaps before the formal launch
